PROFESSIONAL SUMMARY

Senior AI Engineer specializing in productionizing GenAI and machine-learning systems for complex enterprise data. Experienced in architecting scalable document intelligence, agentic workflows, model-routing and ML platforms across financial-services and large-scale production environments, with end-to-end ownership from R&D through multi-region deployment.

EXPERIENCE

FileAI (Bluesheets) - Singapore

Nov 2025 - Present

Senior AI Engineer | *Series A startup transforming unstructured enterprise data with GenAI*

- Architected and productionized a greenfield AI backend for enterprise unstructured-data processing, taking systems from R&D to multi-region production across the US and APAC for document, spreadsheet and multimodal workloads.
- Designed a hybrid programmatic + frontier-LLM pipeline for highly unstructured Excel files, combining deterministic workbook parsing with semantic reasoning to interpret irregular sheets, tables, headers and schemas and convert them into validated structured outputs.
- Productionized a scalable framework for 1,000+ page enterprise documents using hierarchical decomposition, context-aware segmentation, parallel processing, selective model invocation, caching and deterministic execution; increased long-document processing throughput by 200% while reducing LLM inference costs by 20%.
- Engineered resilient agentic workflows and multi-model routing with rate-limit-aware fallbacks, retry strategies and persistent state, improving reliability of long-running AI tasks despite provider constraints and non-deterministic model behavior.
- Built evaluation, observability and CI/CD quality gates to benchmark extraction quality, detect regressions and diagnose failures across model, application and infrastructure layers; partnered with product, engineering, clients and senior leadership on solution design and delivery.

Changi Airport Group - Singapore

Apr 2025 - Oct 2025

AI & ML Engineer

- Built and deployed a production-grade AWS SageMaker training workflow and fraud-detection model factory for highly imbalanced real-world data, contributing to an 80% reduction in fraud.
- Developed a reliable RAG-powered Narrative Dashboard integrating Microsoft Fabric and LLMs for C-suite users, reducing reporting time by 70% while prioritizing grounding, correctness and safe interaction with proprietary data.
- Designed a GenAI automation POC to transform unstructured inputs into scalable structured-data pipelines for downstream enterprise workflows.

Nexie (Former StealthAI) - Bangalore, India

Jan 2023 - Jul 2024

Founder / Software Engineer

- Built a multimodal AI automation platform integrating image, speech and audio-generation models, reducing manual content-production effort by 70% and marketing costs by 40%.

Decimal Technologies - Gurugram, India

Jan 2022 - Nov 2022

Associate Software Engineer

- Developed REST APIs, Angular micro-frontends and AWS Glue ETL pipelines; improved data-processing speed by 50% and reduced operational costs by 30%.

TECHNICAL SKILLS & CERTIFICATIONS

AI / ML: Python, PyTorch, ML, Statistics, LLMs, GenAI, RAG, Agentic Workflows, LangChain, LangGraph, Hugging Face, PEFT/LoRA/qLoRA, SFT, DPO, LLM Evaluation, Guardrails, Vector Databases, Langfuse; **Cloud / MLOps / Engineering:** AWS, SageMaker, ECS Fargate, Lambda, SNS/SQS, Terraform, Docker, MLflow, FastAPI, SQL, Go, Multi-region Architecture, Model Routing, Fallback Systems, CI/CD

Certifications: Data Scientist Associate (DataCamp); Agile Project Management (PMI)

EDUCATION

Singapore Management University - Singapore

Aug 2024 - Dec 2025

Master's in Artificial Intelligence and Data Science (MITB)

Machine Learning, Statistics, Generative AI with LLMs, Data Governance, MLOps, Algorithm Design

NorthCap University - Gurugram, India

Aug 2018 - Jun 2022

B.Tech Computer Science - Cyber Security & Digital Forensics

2nd Place, Technovation 2022 - DevSecOps Major Project Competition
